

OGDCL Working Capital & Inventory Ratios — FIXED

Standard average-balance methodology. Monetary figures are PKR '000. COGS follows the user's specified convention: Royalty + Operating Expenses + Transportation Charges.

Year	Metric	Formula / Inputs	Result
2025	Inventory Turnover	COGS ÷ Average Inventory 169,570,030 ÷ [(1,263,052 + 942,938) ÷ 2]	153.74×
2025	Days Inventory Outstanding (DIO)	Average Inventory ÷ COGS × 365 1,102,995 ÷ 169,570,030 × 365	2.37 days
2025	Days Sales Outstanding (DSO)	Average Trade Receivables ÷ Revenue × 365 624,338,659 ÷ 401,177,969 × 365	567.99 days
2025	Days Payable Outstanding (DPO)	Average Trade Payables ÷ COGS × 365 131,644,387.5 ÷ 169,570,030 × 365	283.37 days
2025	Cash Conversion Cycle (CCC)	DIO + DSO – DPO 2.37 + 567.99 – 283.37	287.00 days
2024	Inventory Turnover	Not calculable using average inventory from the table alone. 2023 inventory is required.	Not calculable
2024	DIO	Not calculable using average inventory from the table alone. 2023 inventory is required.	Not calculable
2024	DSO	Not calculable using average trade receivables from the table alone. 2023 trade debts are required.	Not calculable
2024	DPO	Not calculable using average trade payables from the table alone. 2023 trade and other payables are required.	Not calculable
2024	CCC	Not calculable because average-balance DIO, DSO and DPO cannot all be calculated from the two-year table.	Not calculable

2025 average balances used: Average Inventory = 1,102,995; Average Trade Receivables = 624,338,659; Average Trade Payables = 131,644,387.5.

Important correction: The earlier 2025 inventory turnover and DIO figures based on ending inventory have been replaced with the standard average-inventory calculation. 2024 ratios requiring 2023 opening balances are not presented as calculated because those balances are not in the structured table.
